## Experience

### Təmiz Xalı – Backend Developer (Python/Django)

11/2025 – 12/2025

I developed a company website project for **Təmiz Xalı** using **Django's built-in views** and **templating engine**. The project features structured service pages, dynamic content rendering, a secure contact form, and an admin panel that allows easy management of services and company information. The main focus was on clean navigation, SEO-friendly structure, and fast performance.

### Maestro – Backend Developer (REST Framework/FastAPI)

09/2025 – 12/2025

During a 3-month internship program at **Maestro School**, I worked with a team on **microservice-based e-commerce** and **LLM-supported task management** projects. During the internship, I implemented components of the **microservice architecture** using **Docker, RabbitMQ, REST APIs**, and other related technologies.

### LekalGroup – Backend Developer (Python/Django)

07/2025 – 08/2025

I developed a catalog website project using **Django's built-in views** and **templating system**. Admins can create and manage categories and products, highlight items, and control content visibility. Users can browse products by categories and view detailed information. The main focus was on clean navigation, robust backend logic, and a seamless user experience.

### Baku Design Academy – Backend Developer (REST Framework)

05/2025 – 07/2025

As part of an internship program, I worked as a backend team member for the marketplace platform **Peshekar.online**, collaborating with the frontend team to contribute to the development and creation of the platform. The project enables users to register, showcase their skills, and offer services to clients through fully structured APIs. I improved performance by implementing asynchronous tasks with **Celery** and caching with **Redis**. I designed API endpoints cleanly and applied scalable backend logic to ensure seamless client-server communication.

## Skills

### Programming Languages

- Python

### Frameworks & Architecture

- Django
- REST API
- Fast API
- Microservice Architecture

### Message Brokers & Task Queues

- Celery
- Redis
- RabbitMQ

### Other Skills

- OOP
- OpenAI API
- MCP
- REST API design
- Atomic Transactions
- Logging
- Redis-cache
- Django Signals

### Databases & Data

- PostgreSQL
- SQLite
- Elasticsearch

### DevOps Tools

- Docker
- Git & GitHub
- GitHub Actions
- Nginx

### Testing

- Pytest
- Unittest

### Documentation

- Swagger OpenAPI
- Postman

## Profile

I have experience as a **Backend Developer** with **Python**, primarily working with **Django**, **Django REST Framework**, and **FastAPI**. I am skilled in building **REST APIs**, working with databases, and using **Docker**. I possess problem-solving abilities, good communication skills, and a team-oriented mindset, and I am eager to contribute to real projects and continue developing my expertise.

## Education

### JET Academy, Python/Django Developer: Baku, Azerbaijan

2024 – 2025

I successfully completed an advanced training program at JET Academy focused on **Python programming**, **Django web development**, **Django REST Framework (DRF)**, and **API development**.

### Faculty of Social Sciences and Psychology, Philosophy, Baku State University

2018 – 2022
